HDGraph 1.5.1 has just been released with few improvements :

   -   Ready-to-use on Windows 10 (and also on Windows 8/8.1) : HDGraph now uses .Net Framework v.4.5 (which is activated by default) instead of 3.5 (which required a manual activation). If you're still on Windows 7, you can either continue to use HDGraph v. 1.4.2, or install .Net Framework 4.5.x
.
   -   Some minor fixes (see the changelog)

You can download it from the download page as a simple zip file.Windows XP is not supported anymore, but the previous version is still fully
functional and can be downloaded on the
 download page
.
